Dear Hiring Manager,

I am writing to apply for a full-time Software Engineer or Data Engineer position at your Company. I recently completed my Master of Science in Computer Science at the University of Central Missouri, and I am actively seeking full-time opportunities where I can contribute to building reliable backend systems, cloud-based data pipelines, and scalable data processing workflows.

I have hands-on experience with Python, SQL, and Google Cloud Platform, including BigQuery, Dataflow, Pub/Sub, and Cloud Storage. In my Software Engineer role supporting Verizon Communications, I engineered Python ETL pipelines to process large customer datasets, reduced manual data preparation time by about 60%, built scalable processing workflows using Dataflow and BigQuery, and created visualizations using Matplotlib and Seaborn to communicate insights to stakeholders.

Earlier, as a Software Engineer Intern at Incedo, I built Python automation scripts for data validation, performed exploratory data analysis using Pandas and SQL, and supported cloud workflows using GCP services.

In addition to my academic and professional experience, I am very interested in continuous learning, and I actively build skills through real work. I have done freelance projects using AI-assisted development and vibe coding, including database migration tasks and automation work. I am comfortable writing strong prompts, using AI efficiently for debugging and research, and turning requirements into working solutions quickly, while keeping code clean and maintainable. I believe this ability helps me ramp up faster, deliver consistently, and support teams with high productivity.

I would welcome the opportunity to contribute my technical skills, learning mindset, and strong work ethic to your Company. Thank you for your time and consideration. I look forward to speaking with you.

Sincerely,

Gayathri Tirumala
